SECURITY INCIDENT REPORT - CASE 2024-082
CONFIDENTIAL // FORENSIC INVESTIGATION RECORD

INCIDENT OVERVIEW:
On October 12, 2024, at approximately 21:15 UTC, the Security Operations Center (SOC) detected an anomalous outbound SFTP transmission originating from database server DB-PROD-02 located inside Server Room B.
Total exfiltrated volume: 14.8 Gigabytes containing 420,000 customer profile records, encrypted salted credential hashes, and internal billing routing numbers.
The automated network threshold alert fired at 21:18 UTC when outbound throughput exceeded 120 Mbps to an external unlisted IP address (198.51.100.42).

PRELIMINARY SUSPECTS & PERSONS OF INTEREST:
- Frank Miller: Senior Database Administrator. Possesses unrestricted sudo privileges on DB-PROD-02. Scheduled on-call shift.
- Alice Vance: Lead Infrastructure Engineer. Holds root infrastructure SSH keys and physical server room access badge.
- Bob Chen: Network Operations Specialist. Responsible for firewall configuration rules and port 22 SFTP routing.

INVESTIGATION MANDATE:
1. Reconstruct exact chronological sequence of physical access, authentication sessions, and file staging.
2. Cross-reference witness interview alibis against physical telemetry and digital system event logs.
3. Evaluate competing hypotheses regarding insider exfiltration versus compromised external credentials.
